

### Investing in Your Water

Water treatment systems can sometimes seem like a price tag you do not want to pay for. However, water treatment helps to ensure your home & family are protected from elements in your water.

Get 24% energy savings when using softened cool water to wash clothes

Cut down on single-use plastic waste, when nearly 91% of it ends up in landfills or the oceans.

Protect pipes & appliances that accumulate buildup from contaminants

Spend less on soaps and cleaning detergents. Contaminated water requires certain cleaners and more of them!

Produce 50 gallons per day of drinking water from your own sink vs. spending \$3+ on less than 2 gallons when purchasing the standard 12-pack of bottled water

### Delivery Route Calendars

You asked, we listened! If you are on a delivery route, we will be sending out magnet calendars which will tell you which day of the month your route falls on for the 2024 year!

Whether you're packing for a gourmet picnic or you want to stock up on some of our locally-sourced ingredients for your own cooking at home, stop by Honey Girl in Geneseo. It is also a great spot to get some holiday gifts or make a gift basket with things like honey, olive oil, seasonings, bar supplies & more!

## Local Spotlight

Find her on Facebook, Instagram or visit [honeygirlgifts.com](http://honeygirlgifts.com)

## Customer Portal & Email Billing

**Don't forget to sign up for our email billing! This allows you to forgo our processing fee and have access to the customer portal**

### Directions:

1. Ensure you have provided us with an email address on your account.
2. Go to [culliganlima.myservicetitan.com](http://culliganlima.myservicetitan.com). A prompt at the bottom of the screen will ask you to
3. An email will be sent to you to create your login credentials & access your portal!

# Water Contaminants 101

### What are Contaminants?

Anything found in water — from minerals to microorganisms — that may be harmful to human health. They can be physical, chemical, biological or radiological in substance. Whether or not they are harmful depends on the level at which each contaminant is present.

A water test checks various parameters in your water. These include the pH levels, the total amount of coliform bacteria, nitrates, and dissolved solids.

### Signs of Contamination

Most water in the U.S. contains some level of contamination from industrial and environmental pollution.

These are some signs of contaminated water: Spotting, Scaling, Soap Scum, Staining, Funny Taste or Odor, Dry Skin & Hair, Discolored Water

### Common Contaminants

After water testing, many people install water treatment systems to get rid of specific contaminants.

Here are some of the most common impurities found in water in our area: E Coli, Fluoride, Iron, Sulfur, & Sediment
